PROFESSIONAL SUMMARY

Senior Android engineer with 12+ years of end-to-end mobile and cross-platform application development experience. Proven track record of shipping production-grade Android applications for US-based clients across hospitality, logistics, health, and e-commerce sectors, with onsite US client collaboration. Expertise spans native Android (Java/Kotlin/Jetpack Compose), MVVM architecture, Jetpack libraries, hardware integrations, and Agile delivery. Additionally experienced in cross-platform development with Svelte and Tauri, with AI-augmented engineering workflows using Claude, Cursor, and Codex integrated into daily development cycles.

EXPERIENCE

Senior Software Engineer | [Grubrr Systems Ind. PVT LTD.](#)

June 2017 – Present

US Onsite Client Experience · Hospitality & Quick-Service Industry · Agile / Scrum

- Architected and shipped KIOSK V3 — a self-service food & beverage ordering system built natively for Android and extended cross-platform with Svelte/Tauri, now live across multiple US restaurant locations on low-spec hardware.
- Maintained and extended POS V2 — a native Android Point-of-Sale system handling order processing, payment flows, and real-time kitchen display sync for hospitality clients.
- Led architecture decisions for both products, adopting MVVM pattern and Jetpack Compose for new UI modules, reducing view-layer complexity and improving testability.
- Built hardware integrations for Epson receipt printers, USB/serial peripheral devices, and barcode scanners within native Android and Tauri environments.
- Conducted code reviews across all active projects, enforcing SOLID principles and Kotlin best practices; introduced CI/CD pipelines using Git hooks and automated build workflows.
- Led sprint planning and estimation cycles, coordinating cross-functional delivery across engineering, QA, and US-based client stakeholders.
- Integrated AI-assisted development workflows (Claude, Cursor, Codex) to accelerate feature iteration and reduce debugging cycle time.
- Onsite collaboration with US-based clients on requirements, delivery timelines, and post-launch support across the full product lifecycle.

Founder & Software Engineer | [TriSoftDevelopers](#)

Jan 2016 – June 2017

- Founded a boutique Android consultancy; independently architected and delivered 10+ production apps for clients across India, Portugal, and the UAE.
- Built RMTS — a real-time GPS bus tracking app for Rajkot Municipal Transport with live next-bus monitoring.

- Developed AfsarBitiya (exam prep for GPSC, NEET, IIT) and EasyTax (income tax calculator); managed full client lifecycle from requirements through post-launch.

Software Engineer | eHeuristic Solutions

May 2014 – Jan 2016

- Developed EdgeAlert (Samsung Edge custom notification system), BeamItUp (XMPP location-based chat), and Cric'O (2D cricket card game with in-app purchases).
- Shipped DispatchMe (courier app with QR scanning for Portugal), PetsApp (vet tracker with online + SQLite offline modes), and MedicalPearls (pharma reference app).

LEADERSHIP & ENGINEERING PRACTICES

- Led architecture decisions across KIOSK V3 and POS V2 — defined MVVM structure, module boundaries, and data layer design using Room and Retrofit.
- Conducted ongoing code reviews enforcing SOLID principles, clean code standards, and Kotlin idiomatic patterns.
- Drove sprint planning and estimation across Agile cycles, coordinating engineering, QA, and client timelines.
- Coordinated cross-functional teams spanning Android development, hardware integration, and US-based client stakeholders.
- Introduced CI/CD pipelines and Git-based workflow standards, improving release reliability and reducing manual deployment steps.

FEATURED PROJECT — KIOSK V3

Self-service food & beverage ordering system for restaurants and quick-serve businesses. Built natively for Android and extended cross-platform with Svelte and Tauri. Deployed onsite with multiple US restaurant clients and running reliably on low-spec kiosk hardware.

Stack: Android (Java/Kotlin) · Jetpack Compose · MVVM · Room · Retrofit · Hilt · Svelte · Tauri · TypeScript

Hardware: Epson receipt printer integration · USB/serial peripheral devices · Barcode scanners

Impact: Live in production across multiple US locations · Runs on low-spec hardware · Full lifecycle ownership from architecture to post-launch support

POS V2	Android POS for hospitality — MVVM, Retrofit, real-time kitchen display sync. Live with US restaurant clients.
PetsApp	Vet appointment & vaccine tracker — Retrofit (online) and Room/SQLite (offline) dual-mode architecture.
PersPecTus	Custom navigation app built on MapBox API, comparable in scope to Google Maps.
DispatchMe	Courier management app with QR scanning for a Portuguese logistics company.
BeamItUp	Location-based real-time XMPP chat with OpenGL UI animations.
AfsarBitiya	Exam prep platform for GPSC, NEET, IIT with offline content and Firebase sync.

TECHNICAL SKILLS

Core Android

Java, Kotlin, Jetpack Compose, XML Layouts, MVVM, Android SDK, Gradle

Jetpack & Libraries

Room, Retrofit / OkHttp, Hilt / Dagger, Coroutines / Flow, WorkManager, Navigation, Paging

Firebase & Quality

Firebase, Crashlytics, JUnit, Espresso, CI/CD, Git, Agile / Scrum

Hardware & Integrations

Epson Printers, USB / Serial, QR Scanning, MapBox API, XMPP, OpenGL, Bluetooth

Cross-Platform & Web

Svelte, Tauri, TypeScript, Python, HTML/CSS, JSP/Servlet, SQLite

AI Tooling

Claude, Codex, Cursor IDE, Agentic AI, Prompt Engineering, RAG, LLM Pipelines

EDUCATION

Bachelor of Engineering – Information Technology

C.U. Shah College of Engineering & Technology, Surendranagar

2009 – 2013

LANGUAGES

English · Hindi · Gujarati
